AMENDMENTS TO THE CLAIMS

1-24. (Cancelled)

25. (Currently Amended) A printed circuit board design instruction support device that

supports printed circuit board design between a circuit design and a printed circuit board design,

said device comprising:

means for reading a circuit diagram designed by the circuit design;

means for storing design instruction information regarding the printed circuit board

design and keywords, which are associated with said design instruction information and set

corresponding to the type of items included in said. circuit diagram; and

means for extracting keywords corresponding to the type of items included in the read

circuit diagram and displaying design instruction information associated with the extracted

keywords, when the circuit diagram is read by said reading means

means for displaying design instruction information regarding previously fixed printed

circuit board design based on a circuit diagram designed by a circuit design.

26. (Currently Amended) The printed circuit board design instruction support device

according to claim 25, wherein

said display displaying means displays keywords, which are associated with said design

instruction information and set based on the type of items regarding a circuit design, together

with said design instruction information corresponding to the type of items included in the read

2

circuit diagram when the circuit diagram is read by said reading means.

Docket No.: 1794-0182PUS1

27. (Canceled)

28. (Currently Amended) The printed circuit board design instruction support device

according to claim [[27]] 25, wherein said device comprising:

said extraction means extracts damping resistances being items included in said circuit

diagram and target ICs of the resistances based on the part attribute of the damping resistances

and the wiring connection information of the damping resistances

means for extracting damping resistances and target ICs of the resistances from the

circuit diagram read said reading means, by extracting resistances, which have an attribute of

series connection, from the circuit diagram read by said reading means and discriminating

whether or not items connected to the pins of the extracted resistances are ICs.

29. (Currently Amended) The printed circuit board design instruction support device

according to claim [[27]] 25, wherein said device comprising:

said extraction means extracts bypass capacitors being items included in said circuit

diagram and target ICs of the capacitors based on the wiring connection information of the

bypass capacitors

means for extracting bypass capacitors and target ICs of the capacitors from the circuit

diagram read by said reading means, by extracting capacitors, which are connected to a power

source and ground, from the circuit diagram read by said reading means and discriminating

whether or not the extracted capacitors are capacitors connected to IC toward the power source

side.

30. (Currently Amended) The printed circuit board design instruction support device

according to claim [[27]] 29, wherein

said extraction means when the extracted capacitors are connected to a plurality of ICs,

extracts an IC having the shortest connecting distance out of the ICs extracts bypass capacitors

being items included in said circuit diagram and target ICs of the capacitors based on the

arrangement positional information of the bypass capacitors and the wiring connection

information of the bypass capacitors.

31. (Currently Amended) The printed circuit board design instruction support device

according to claim 29, wherein

said extraction means extracts the bypass capacitors being items included in said circuit

diagram, the target ICs of the capacitors, and the information of wiring connecting the both parts

from the circuit diagram read by said reading means.

32. (Currently Amended) The printed circuit board design instruction support device

according to claim [[27]] 26, said device comprising:

means for extracting items included in the circuit diagram read by said reading means;

<u>and</u>

Reply to Office Action of June 16, 2008

means for associating items that were extracted based on by said extraction means with

said design instruction information via said keywords, wherein

said display means displays the items associated by said association means.

33. (Currently Amended) The printed circuit board design instruction support device

according to claim 32, wherein

said reading means reads a printed circuit board diagram designed by the printed circuit

board design, said device comprising:

means for selecting items or keywords displayed by said display means; and

means for highlighting items on [[a]] the printed circuit board diagram read by said

reading means designed by a printed circuit board design, which correspond to items selected by

said selection means, when the items are selected by said selection means, and highlighting items

associated with the keywords on said printed circuit board diagram read by said reading means,

which correspond corresponds to keywords selected by said selection means, when keywords are

selected by said selection means.

34. (Currently Amended) The printed circuit board design instruction support device

according to claim 32, said device comprising:

means for selecting items or keywords displayed by said display means; and

means for highlighting items on said circuit diagram read by said reading means, which

correspond to items selected by said selection means, when the items are selected by said

selection means, and highlighting items associated with keywords on said circuit diagram read

Docket No.: 1794-0182PUS1

by said reading means, which correspond to keywords selected by said selection means, when

the keywords are selected by said selection means.

35. (Currently Amended) The printed circuit board design instruction support device

according to any one of claims 33 and 34, said device comprising:

means for executing macro that performs control such that said display means displays

the entire circuit diagram read by said reading means before items are highlighted by said

highlight means, macro that performs control such that said display means displays highlighted

items in an enlarged manner after the items were highlighted by said highlight means, or macro

that performs control such that said display means displays the entire circuit diagram read by

said reading means before items are highlighted by said highlight means and said display means

displays highlighted items in an enlarged manner after the items were highlighted by said

highlight means supports check in printed circuit board design before items are highlighted, after

items are highlighted, or before and after items are highlighted by said highlight means.

36. (Currently Amended) The printed circuit board design instruction support device

according to any one of claims 25, 26, [[27,]] 28, 29, 30, 31, 32, 33 and 34, said device

comprising:

means for managing whether or not a printed circuit board design was performed

according to said design instruction information, by accepting the input of a result in which said

design instruction information was reflected on the printed circuit board design and accepting an

authorization to said result.

Application No. 10/575,758 Docket No.: 1794-0182PUS1

Amendment dated September 16, 2008 Reply to Office Action of June 16, 2008

37-41. (Canceled)

42. (Currently Amended) A program for allowing a computer to function as the printed

circuit board design instruction support device according to elaim 25 any one of claims 25, 26,

28, 29, 30, 31, 32, 33 and 34.

43. (Previously Presented) A program for allowing a computer to function as the printed

circuit board design instruction support device according to claim 35.

44. (Currently Amended) A printed circuit board design instruction support method in which

printed circuit board design is supported between a circuit design and a printed circuit board

design, said method comprising the step of:

reading a circuit diagram designed by the circuit design;

storing design instruction information regarding the printed circuit board design and

keywords, which are associated with said design instruction information and set corresponding to

the type of items included in said circuit diagram; and

extracting keywords corresponding to the type of items included in the read circuit design

and displaying design instruction information associated with the extracted keywords, when the

circuit design is read by said reading means

displaying design instruction information regarding previously fixed printed circuit board

design based on a circuit diagram designed by a circuit design.

Application No. 10/575,758 Docket No.: 1794-0182PUS1 Amendment dated September 16, 2008

Reply to Office Action of June 16, 2008

45. (Currently Amended) A program for allowing a computer to execute-function as the printed circuit board design instruction support method device according to claim 44.

46. (Previously Presented) A computer-readable recording medium recording the program according to claim 42.
